## Certificate of Analysis

### Rhyolite, Glass Mountain, RGM-1

The rhyolite, from Glass Mountain, Siskiyou County, California, was collected from a single block of massive obsidian near the terminal front of a Holocene obsidian flow. The sample is classified as a rhyolite on the basis of its high silica and total alkali contents, and it is assigned to the calc-alkali series because of its high CaO to total iron ratio.

The concentrations were determined by cooperating laboratories using a variety of analytical methods. Values reported are derived from international data compilations (Abbey, 1983, Gladney and Roelandts, 1988, Govindaraju, 1994). Initial USGS reports (Flanagan, 1976) provide background information on this material.

## Glossary

Fe <sub>2</sub> O <sub>3</sub> T	Total iron expressed as Fe <sub>2</sub> O <sub>3</sub>
C <sub>tot</sub>	Total concentration of carbon
S <sub>tot</sub>	Total concentration of sulfur
Wt %	Percent of total element concentration
µg/g	Total element concentration expressed as micrograms of element per gram of solid sample
±	One standard deviation

## Notes

Unless otherwise indicated total element concentrations are reported for material on an as-received basis, i.e., no drying.
